

Customer Journey Map

Date	25 June 2026
Team ID	
Project Name	Machine Learning-Based Flood Prediction and Early Warning System
Maximum Marks	2 Marks

Customer Journey Map

Mapping the user's experience throughout the flood prediction process, including their actions, touchpoints, thoughts, emotions, process ownership, and opportunities for improvement.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions	User enters weather parameters such as annual rainfall, seasonal rainfall, and cloud visibility into the Flood Prediction web application.	The system preprocesses the weather data and analyzes it using the trained XGBoost machine learning model.	The user receives the flood risk prediction (Flood Likely / No Flood) along with the prediction result on the web application.
Touchpoint	Flood Prediction Web Application (Flask UI)	Machine Learning Prediction Engine	Prediction Result Page / Dashboard
Customer Thought	"I hope the system accurately predicts the flood risk for my area."	"I wonder how the system analyzes the weather data and predicts flooding."	"I'm relieved/excited if approved, disappointed if rejected."
Customer Feeling	Concerned, Alert, Hopeful	Curious, Anxious	Confident, Relieved (if no flood) or Prepared and Cautious (if flood is predicted)
Process Ownership	User Interface Development Team	Machine Learning & Backend Development Team	Disaster Management Authorities / Application Support Team
Improvement Opportunities	Simplify weather data entry and provide input guidelines.	Improve prediction speed and integrate real-time weather APIs for higher accuracy.	Provide SMS/Email alerts, evacuation guidance, nearby shelter locations, and disaster response recommendations.
